Memories In Breeze

=====

■ Introduction

Thank you for using "Memories In Breeze" (hereinafter referred to as "this software"). This software is a product created by Genfulew_Effect and is a collection of assets containing animation effect assets that can be used in the game production support software "Maker" series.

■ About this software

This software is a collection of effect assets designed to add vibrant color and flair to your original games.

If you want to bring more atmosphere to your maps or add emotional impact to your events, this collection is made for you. It includes a wide variety of effects to enhance your scenes, such as rain and snow, rainbows and auroras, fireworks, and more!

■ System Requirements

System supporting "RPG Maker MZ".

■ How to use

To use these effects in your RPG Maker MZ project, please follow the steps below:

1. From the extracted folder, copy the entire **"Genfulew_Effect"** folder into your project's **"effects"** folder.
 - ⚠ Do not copy only the files inside **"Genfulew_Effect"** directly into the **"effects"** folder. Doing so may cause conflicts with other creators' files.
2. If your project already has a **"Genfulew_Effect"** folder, simply overwrite it.
3. Open RPG Maker MZ. Go to **Tools** → **Database** → **Animations** → **Particle Effects** → **Filename**.

From there, open the **"Genfulew_Effect"** folder and choose the effect you want to use.
4. Alternatively, you can copy the animation settings directly from the included RPG Maker MZ sample project and paste them into your main project.

END USER LICENSE AGREEMENT
IMPORTANT, READ CAREFULLY.

This asset is a product for RPG Maker MZ, however, the terms and conditions of use are subject to the terms and conditions in the URL below. Please refer to the following URL.
